Jan:April-2018

**Mission Veterans High-School**, high-school diploma

Jan:April-2018

## PROJECTS

**TheStrain(API)** - Solely, I was able to call a API which carried a database with over 2,000 strains of Marijuana. I then used that to create a site where the user may look up a strain they want, which would return the name, race and description of the strain. Descriptions include medical reasonings, as if one treats anxiety or depression, the other relaxes the muscles or treats appetite loss.

Languages Used: HTML, CSS, Php, Laravel, API, Bootstrap-5, and Git.

**Fortnite Stat Tracker(API)** - Two others and myself pulled a API from EpicGames famous game Fortnite, to bring out the stats of a any player who plays the game. We created a site to where a user can compare two players and their stats to see who is better.

Languages Used: HTML, CSS, Php, Laravel, API, Bootstrap-5, and Git.

## SKILLS

HTML

Git

CSS

C++

Jquery

JSon

JavaScript

PHP

MySQL

Laravel (MVC Framework)

Linux

Apache

RESTful APIs,

Bootstrap-4
